## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-15 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Imai (4,702,986). Imai teaches an image forming process where the developer contains a toner and a fine powder of silicon carbide (col. 7-8). Imai teaches that the silicon carbide has the same size, surface area, and amount and is used in similar toner additive applications for the same intended for use as an abrasive material. In the alternative, it would have been obvious that the same silicon carbide used in the same manner would have the same agglomeration particle properties because of the similar use and desired results of using silicon carbide external additives in electrophotographic developers.

***Response to Arguments***

4. Applicant's arguments filed 11-30-05 have been fully considered but they are not persuasive.

Applicant argues that Imai is limited to organic photoconductors. Applicant's instant independent claim 9 is drawn to the inventive concept of the developer containing the particular silicon carbide fine powder. It would have been obvious to one of ordinary skill in the art that any type latent image carrier, inorganic or organic, may be used with the inventive developer as evidenced by the instant specification (pages 1-6) and general knowledge of abrading and cleaning of photoconductors by the use of silicon carbide (see especially the paragraph bridging pages 5 and 6).

5. The declaration under 37 CFR 1.132 filed 11-30-05 is insufficient to overcome the rejection of claims 1-15 based upon Imai as set forth in the last Office action because: the declaration is not germane to the rejection at issue and not commensurate in scope with the claims. Although the declaration shows comparative examples where the amount of agglomerated particles is below 10% and above 60%, the other characteristics such as silicon carbide size and specific surface area are not commensurate in scope to the direct teaching of Imai.

***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 1756

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
